NeuRemedy®

For the healthy function of the nerves in the feet and legs*

NeuRemedy® Nourishes the Nerves

What is peripheral neuropathy?

Peripheral neuropathy is a medical condition in which the nerves that travel from the brain and spinal cord to other parts of the body function improperly. People who suffer from peripheral neuropathy commonly experience burning, tingling, numbness and/or shooting pains to their feet and legs. These symptoms are usually worse at night.

There are over 100 known causes of peripheral neuropathy. A partial list of causes includes diabetes, thiamine deficiency, alcoholism, trauma, exposure to toxins, autoimmune diseases and infections. Sometimes no cause can be determined.

Can peripheral neuropathy be successfully treated?

Yes. Some forms of peripheral neuropathy may be successfully treated. For example, people suffering from peripheral neuropathy caused by thiamine deficiency or vitamin B12 deficiency may experience significant relief by increasing intake of these vitamins.

What is NeuRemedy and how does it work?

Adequate blood levels of the micro-nutrient thiamine are essential for the proper functioning of the nervous system. Recent studies have shown that many people suffering from peripheral neuropathy have low plasma levels of this essential micro-nutrient. They need a more bioactive form of thiamine for their nerves to function properly. This population includes, but is not limited to, people with diabetes and the elderly.

NeuRemedy supports healthy nerve function in the feet and legs by delivering a highly bioactive form of the micro-nutrient thiamine to where it is needed, the nerve cells. **NeuRemedy** works by nourishing the nerves.

What about safety and drug interactions?

The active ingredient in **NeuRemedy**, benfotiamine, has been used since the early 1960's in Asia and Europe to successfully treat tens of thousands of people suffering from peripheral neuropathy. Realm Labs has finally made it available in America. Benfotiamine has been scientifically proven to be safe and effective. It does not have any known significant adverse effects and can be safely taken with medicines and supplements.

What is NeuRemedy Plus?

NeuRemedy Plus is formulated for those people who need the combined beneficial effects of **NeuRemedy**, our signature

benfotiamine product, and methylcobalamin, a highly bioactive specialized form of vitamin B12.

How long does it take for NeuRemedy and NeuRemedy Plus to work?

Some people experience the beneficial effects in a few days. For some people it may take up to two months in order to feel the benefits. **NeuRemedy** and **NeuRemedy Plus** do not work for everyone. Ask your doctor which product is right for you.

Who should use NeuRemedy and NeuRemedy Plus?

People who may have low levels of thiamine and/or vitamin B12 may benefit from **NeuRemedy** and **NeuRemedy Plus**.

This population includes, but is not limited to:

- Diabetics
- Elderly
- People on diuretics (water pills)
- People with a history of alcohol abuse
